

ABSTRACT

5 A latch reinforcing block for engagement with the nose portion of any tilt latch
assembly and preferably with the above-mentioned camlock/tilt latch
combination, said block comprising a top and bottom and having extending from
proximate the top to proximate the bottom there-through fastening portions to
fasten said reinforcing block within the track of a preferred window assembly,
said reinforcing block having disposed proximate the top thereof at least one
10 cutout, notch or pocket extending towards the bottom and for receipt of a
corresponding nose portion of the latch assembly in order to pass loads such as
wind loads or the like to the frame section to which the reinforcing block is
attached.
